-i- FUNCTION: THIS SIFUNCTIONAL ENZYME CATALYZES TWO CONSECUTIVE REACTIONS CONVERTING 2',3'-CYCLIC-NUCLEOTIDE TO 3'-NUCLEOTIDE AND THEN 3'-NUCLEOTIDE TO NUCLEIC ACID AND PHOSPHATE.

-i- CATALYTIC ACTIVITY: Nucleoside 2',3'-cyclic phosphate + H(2)O =

BIOPHYS. ACTA 1384:345-355 (1998).

- I:- FUNCTION: CYTOCHROME C2 IS FOUND MAINLY IN PURPLE, NONSULFUR, PHOTOSYNTHETIC BACTERIA WHERE IT FUNCTIONS AS THE ELECTRON DONOR TO THE OXIDIZED BACTERIOCHLOROPHYLL IN THE PHOTOPHOSPHORYLATION PATHWAY. HOWEVER, IT WAY ALSO HAVE A ROLE IN THE RESPIRATORY CHAIN AND IS FOUND IN SOME NONPHOTOSYNTHETIC BACTERIA. THE REDOX POTENTIAL OF THIS CYTOCHROME IS 316 MV.
                                                                                                                                                                                                                                                                                                SEQUENCE

Microbiology 141:1183-1191(1995).

-!- CATALYTIC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP phosphate + L-glutamate + carbamoyl phosphate.
-!- PATHWAY: Arginine biosynthesis.
-!- PATHWAY: Pyrimidine biosynthesis; first step.
-!- SUBUNIT: Composed of two chains; the small (or glutamine) chain promotes the hydrolysis of glutamine to ammonia, which is used being large (or ammonia) chain to synthesize carbamoyl phosphate.
-!- SIMILARITY: BELONGS TO THE CARA FAMILY.
-!- SIMILARITY: CONTAINS 1 TYPE-1 GLUTAMINE AMIDOTRANSFERASE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted [2]

Nature 404:502-506(2000).

-I- CATALYTIC ACTIVITY: 2 ATP + L-glutamine + CO(2).

-phosphate + L-glutamate + carbamoyl phosphate.

-I- PATHWAY: Arginine biosynthesis.

-I- PATHWAY: Pyrimidine biosynthesis; first step.

-I- SUBUNIT: Composed of two chains; the small (or g. promotes the hydrolysis of glutamine to ammonia, the large (or ammonia) chain to synthesize carban

-!- CAPALYTIC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP phosphate + L-glutamate + carbamoyl phosphate.
-!- PATHWAY: Arginine biosynthesis.
-!- PATHWAY: Pyrimidine biosynthesis; first step.
-!- SUBUNIT: Composed of two chains; the small (or glutamine) chain promotes the hydrolysis of glutamine to ammonia, which is used the large (or ammonia) chain to synthesize carbamoyl phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tettelin H., Saunders N.J., Heidelberg J., Jeffries A.C., Nelson K.E., Eisen J.A., Ketchum K.A., Hood D.W., Peden J.F., Dodson R.J., Nelson W.C., Gwinn M.L., DeBoy R., Peterson J.D., Hickey E.K., Haft D.H., Salzberg S.L., White O., Fleischmann R.D., Dougherty B.A., Mason T., Ciecko A., Parksey D.S., Blair E., Cittone H., Clark E.B., Cotton M.D., Utterback T.R., Khouri H., Qin H., Vamathevan J., Gill J., Scarlato V., Masignani V., Pizza M., Grandi G., Sun L., Smith H.O., Fraser C.M., Moxon B.R., Rappuoli R., Venter J.C.; Complete genome sequence of Neisseria meningitidis serogroup B strain Complete genome sequence of Neisseria meningitidis serogroup B strain

Cytochrome C2, iso-2 (C552).
Rhodospirillum centenum (Rhodocista centenaria)
                                                                                                                                                                                                                                                                                                                                                                                                                             Biochim. Biophys. Acta 1384:345-355(1998).

- I- FUNCTION: CYTOCHROME C2 IS FOUND MAINLY IN PURPLE, NONSULFUR,
- PHOTOSYNTHETIC BACTERIA WHERE IT FUNCTIONS AS THE ELECTRON DONOR
TO THE OXIDIZED BACTERIOCHLOROPHYLL IN THE PHOTOPHOSPHORYLATION
